[ANNUAL REPORT]

2008 -2009

Water is an important component for the survival of the living being. But day by day with the rapid increases in the population, the demands for water is kept on rising. The efforts done by the different machineries seem very little in front of it. Therefore awareness needs to create among the people of the district to conserve whatever little source they have in their hand.

The organization has carried out extensive awareness campaign with the help of street shows and awareness programmes in the city of Ajmer. We have covered all the Slum dwelling areas along with other areas of the district namely Pisangan, Bhinai, Silora, Arain, Nasirabad, Beawar, Kishangarh, Kekri, Jawaja, Masuda, Pushkar.

We emphasized on hygiene, the key for eradicating a majority of the health problems. We also educate people about water borne diseases. In this session we explained how to keep our resources clean, how to prevent water pollution and save water in the family and for future generations and methods for disease prevention.

SANITATION

One to one contact and shows were the tools adapted by the organization. The shows were held at important spots of the individual areas. The hour long shows threw highlights on the important aspects of water like the amount available on the earth, the ways to conserve water, the disease borne out of water pollution, the right use of water, the amount of water wasted due to human activities, the actual need of the water as per the person

Poor people line up for hours near water tanker or Water Tap and then watch their children repeatedly fall prey to diarrhea and hepatitis.

Discussion and competition were organized on topics related to water and its importance among children in different schools in the city. It is always our thinking that growing children are the best medium to serve the society on different pressing problems in the society. So we kept our thrust over them during different programmes in the schools particularly government schools of the city.

We think that little saving of water means a big contribution to the society. During our campaigns we stressed on the need to conserve rainwater by channel -sing it to the ground water or store it in the big tank to use it further. Such efforts help to preserve the water which goes waste during the rainy season. Such efforts will help in maintaining underground water level as lots of under ground water pumps has degraded the water level in the city and the district.

In India, most of the people particularly females and children as they are more susceptible to infection die from sanitation related problem or poor health management.

Poor disposal of Human excreta is harmful for health as harmful organism will be carried by insects or by fingers of Children or any one to the residence making edible substance impure.

In Rural areas of Ajmer district, most of the person excretes the human waste in open spaces. Generally, the waste is excreted in Forest, near ponds, along the road side, in agricultural fields. Children are generally more adapted to it. The waste excreted in water adds undesired particles in the water.

The absence of drainage facilities means that water collects at one place and become the breeding ground for the insects. The water collected around the sources of drinking water seeps in the earth and pollutes the underground water. Drains are found blocked due to Polythene or not cleaning on the time and or due to collection of undesired material. As a result water collects and develops as source of breeding ground for insects

Many such problems can be noticed in the District of Ajmer. We showcased such alarming conditions during our different shows in different blocks namely Srinagar , Bhinai, Pisangan, Masoda and Kekri in the district with the support of Jila parishad Ajmer.

We believe Sanitation is a way of living life and it drives us to live a better, a prosperous and a healthy life. It means that the surrounding of the human being be it Air Water and Soil are all pure and free from all type of pollution.

ENVIRONMENT POLLUTION

Environment is a key concern for the mankind. The danger to mankind existence is hovering around in the face of the fast changes taking place all over the world. Our organization has played its role in the campaign to protect environment by holding street shows in different places of Ajmer city with the support of Jala parishad under MADA & MAGRA YOJNA & other program in Ajmer city.

During the programs it was tried to understand the concern of the people of the city. Though the city has few industrial units but the increasing traffic, increasing population and the growing demands all have increased burden on the environment.

Some of the key spots in the city for instance Station Road, Kutchery Road and Agra Gate have turned up into danger zone. Therefore tree plantation is necessary to check down the amount of in toxic chemicals in the environment.

The other important issue related to the environment is disposal of Solid waste. Heaps of solid waste i e inorganic and organic can be seen in different parts of the city .Such wastes invites the number of causal organism of innumerable diseases. Children are particularly vulnerable

to it. Though, it does not isolate other aged people of the city. Animals flocking near such heap have developed it as their permanent place of dwelling. Such unhealthy pictures also make the city sloppy. It has been seen that the requirements of the city.

Such Waste is responsible for plugging the lanes which causes the floods during the rainy season. Every year lots of money is kept reserved for the cleaning of the canals. Such expenditure is on the increase year by year. Therefore some thing needs to be done in this direction in order to lower down the expenditure.

Some of the programs like Debates, Slogan Writing and Drawing Competition were holds in different schools and colleges. Some street shows were also organized in slum areas namely Kanjar Basti, Sansi Basti, Rati Dang,

Jadogar, Pharganj, Guajr Dharti, Kotra, Khanpura and Boraj Basti.

Sewerage treatment plant has been constructed on the outskirts of the city to treat the organic disposal material of the house holds of the city. This initiative will help to eradicate the problem of Organic waste in the city. A modern trenching ground is also under construction in Sandriya to help in disposing the inorganic waste of the city.

Organic Farming Training Farming: -

In the year 2008-09 Rajasthan Samgrah Kalyan Sansthan, Ajmer was organized Organic Farming Training Program with the support of Sathi Foundation and with the people support organization has provide the transitioning to organic production, organic vegetable production systems, organic vegetable marketing, development of short or long term goals and plans, soil and site evaluation pre – purchase, organic weed management, organic fertility, organic pest control, organic soil building systems, small and mid – size vegetable equipment systems, small and mid – size vegetable equipment systems, post harvest handling for vegetable production etc.

Vermin compost Training Program: -

In the year 2008-09 Rajasthan Samgrah Kalyan Sansthan was organized the vermin compost Training Program by the Jointy Rud Sethi & DRDA Ajmer. Vermin compost Training Program was

started on 17th Dec. 2008 to 23rd Dec. 2008 where 16 SHG of Pisangan and Jawaja Block participated. Agriculture Scientist took 16 session of two hours each to teach the

production process of Vermin compost, vermin wash and Bio-pesticides.

The compost can be directly used by the farmers of the village in place of chemical fertilizers, thereby reducing cost and health hazards.

SELF HELP GROUP

The basic aim behind the work undertaken by the organization to form self help group was to promote a feeling of self belief among the women particularly belonging to Lower and Marginalized

castes of the villages. Self help group could be the medium where they can share their ideas, discuss with one other and can engage in some kind of income generation programs.

The organization with the devoted workers had tried to gather them at one place on monthly basis. The one day meetings had specified program schedule namely trainings on maintenance of accountancy and the discussion on advantages of having such group in the villages. During the meetings it was tried that all the participants put their views so that it could not be

called as some men group and the rest were basically remain their followers.

The organization had formed some 200 groups in Srinagar , Bhinya and Masoda block in the district. The money so got collected by the contribution from the members and the organization in the group was used to provide inter loaning within the group. Loan provided them valuable assistance during the time of financial crisis like drought, during the marriages or time of decease of near ones and some have start some little income generation activities at small scale in some villages.

Jila parishad had landed their hands to the organization to motivate the villagers to form self help groups.

Animal Husbandry training Programme

The organization with people support hold provided training on Animal Husbandry.

The training was organized in villages of panchayat samiti of shrinagar & masuda of ajmer district. During the training Vet nary Doctor made aware

people about animal diseases and their treatment governmental schemes related to animal husbandry, etc. This livestock development

may lead to income generation and skill development the following activities were undertaken during the program

1. Village contact expedition
2. People contact
3. Nukkad Natak
4. Poster & banner
