Corporate social responsibility:
making good business sense

JANUARY 2000

Richard Holme  Rio Tinto
Phil Watts  Royal Dutch/Shell Group
We have to choose between a global market driven only by calculation of short-term profit, and one which has a human face. Between a world which condones a quarter of the human race to starvation and inequality, and one which offers everyone at least a chance of prosperity, between a selfish, narrow-minded perspective, and one which accepts their responsibilities, and succeeds in which the strong share the burden of the weak, in a healthy environment. Between a selfish, narrow-minded perspective, and one which accepts their responsibilities, and succeeds in which the strong share the burden of the weak, in a healthy environment. In the 21st century, we will have to live together as equals, or we will be left behind. "It's not what one knows, but what one understands, that counts."

C. Michael Armstrong, Chairman, AT&T, 1999

"AT&T understands the need for a global alliance of business, society and the environment. In the 21st century, the world can't tolerate businesses that don't take that partnership seriously, but it will eventually reward companies that do."

C. Michael Armstrong, Chairman, AT&T

ISBN 2-940240-078
Foreword

AS CO-CHAIRS OF THE WORKING GROUP which has produced this Report on corporate social responsibility, we believe it represents a significant step forward in understanding the principles and practices by which companies can best live up to their responsibilities as global citizens and local neighbors in a fast-changing world.

We have talked and listened to many people, inside and outside business, in every continent, coming from many different perspectives. We welcome the growing recognition, reflected for instance in the UN Secretary-General’s proposal for a Global Compact, that business is part of the solution to creating a more stable, healthy and prosperous world. International business must build on that recognition and examine its own contribution with a sharp and self-critical eye.

Sustainable development, like building a successful business, requires taking the long-term view. It also requires the integration of social, environmental and economic considerations to make balanced judgements for that long-term. Increasingly that is what our WBCSD members, and companies like them, are trying to do in making business and investment decisions.

We live in a world which says “Don’t tell me, show me”, where power must expect to be challenged, and where transparency is recognised to be best both for markets and society. Business must take full account of these societal expectations. That is why, in this Report, we have urged companies to declare openly what their values are and to communicate how well they live up to them.

Our basic message is very simple. Business is not divorced from the rest of society. Business and society are interdependent and we must ensure, through mutual understanding and responsible behavior, that the role of business in building a better future is recognized and encouraged. We hope this Report will be seen as a contribution towards increasing such understanding and encouraging the behavior which will underpin it.

Executive summary

In 1998, the WBCSD Council launched an ambitious two-year program aimed at providing a better understanding of what corporate social responsibility (CSR) means and what represents good practice. After an initial Report, Meeting Changing Expectations, published in March 1999, this Report represents the culmination of this effort and a synthesis of our findings.

Based on our two-year initiative, we conclude that:

- a coherent CSR strategy, based on integrity, sound values and a long-term approach, offers clear business benefits to companies and a positive contribution to the well-being of society;
- a CSR strategy provides the opportunity to demonstrate the human face of business;
- such a strategy requires engagement in open dialogue and constructive partnerships with government at various levels, IGOs (inter-governmental organizations), NGOs (non-governmental organizations) other elements of civil society and, in particular, local communities, and;
- in implementing their CSR strategies, companies should recognize and respect local and cultural differences, whilst maintaining high and consistent global standards and policies;
- and finally, being responsive to local differences means taking specific initiatives.

For many companies, managing corporate social responsibility well is no longer seen as an extra cost or burden on hard-pressed management. Rather, CSR is increasingly viewed, not only as making good business sense but also contributing to the long-term prosperity of companies and ultimately its survival. Being a good neighbor and showing that you care on the one hand and being a successful business on the other, are flip sides of the same coin.

On this basis, the WBCSD Working Group convened a series of global stakeholder dialogues and assembled information about how CSR is viewed around the world. We did this in order to gauge our progress and rigorously test our thinking. The dialogues involved both business and non-business participants and were held in the Netherlands, Taiwan, Thailand, the Philippines, the United States, Ghana, Brazil and Argentina. The fundamentals of CSR – maximising the long-term contribution of business to society and taking care to minimize adverse impacts – were consistently accepted. However, we found significantly different emphases in different parts of the world.

Increasingly companies manage social issues in the same way as they manage any other strategic business issue and there are a growing array of tools available to assist and guide them. We provide a step-by-step approach to managing CSR, from initial assessment, to determining your “social footprint” through to suggestions on how to measure performance. It is important to recognize that CSR means more than promulgating a company’s own values and principles. It also depends on understanding the values and principles of those who have a stake in, or are affected by, its operation.

In the Report, the Working Group offers a navigator to guide companies in their implementation of CSR. It is both a tool and a conceptual approach. It takes account of the need to tailor CSR practice according to an overall vision while also having the ability to respond to specific challenges.
Setting the scene

SINCE ITS CREATION IN 1995, the World Business Council for Sustainable Development (WBCSD) has been addressing the challenges and opportunities of sustainable development based on three fundamental and inseparable pillars: the generation of economic wealth, environmental improvement and social responsibility. The third of these pillars, social responsibility, is firmly on the international policy agenda although a universally accepted definition of CSR has yet to emerge.

In 1998, the WBCSD Council established a Working Group charged with providing a better and shared understanding of what CSR means, what represents good practice, and tackling the question of “what do companies do differently on Monday morning to make CSR happen?” This Report contains a synthesis of these findings based on our research, interviews and stakeholder dialogues.

To define the scope of CSR, to identify instances of good practice, and to help companies recognize that it is of strategic importance has proved challenging. It can best be described as an exploratory journey towards the identification and creation of common benefits which demands commitment, co-operation and clear-sightedness from all involved.

This Report represents our second contribution to the debate on corporate social responsibility. In our first Report, we provided some early thinking and stocktaking about how business views CSR and the associated challenges. The key conclusions of this first contribution, Meeting Changing Expectations included:

- recognition that the CSR priorities today are human rights, employee rights, environmental protection, community involvement and supplier relations;
- support for the view that a coherent CSR strategy, based on integrity, sound values and a long-term approach, offers clear business benefits;
- encouragement for companies to articulate their own core values and codes of conduct, or failing that, to endorse and implement codes produced by others, and
- emphasis on the importance of being responsive to local and cultural differences when implementing global policies.

These early conclusions provided the foundations upon which our subsequent work has been built. We recognized that in order to understand CSR better and begin to manage it more effectively, we needed a more extensive consultative process, which would include broader geographic and cultural perspectives.

So we organized a series of stakeholder dialogues with business and non-business people in Taiwan, Thailand, the Philippines, the United States, Ghana, Brazil and Argentina. What we learned from these global consultations are captured in this report.

With regard to what represents good practice, we undertook a more comprehensive investigation of the tools and indicators available to help companies manage CSR. A common reaction to CSR seemed to be: “Corporate social responsibility is a very broad agenda. Please give us something that we can do differently on Monday morning to make things happen.” In an attempt to answer this challenge, a team of WBCSD companies collaborated with three external organizations to probe this question further. The results of their work are highlighted and summarized in this Report.

Because CSR is a dynamic and developing concept, this Report is about direction rather than destination. It is aimed at senior managers in companies in order to raise their awareness of how CSR is progressing and where the debate surrounding it might lead. We are not trying to produce an all-encompassing treatise on the topic. Nor is this report a comprehensive primer. We assume that our readers are, at least to a degree, already familiar with the CSR issue and have seen our first Report. However, we have identified some resources in Appendix 4.

### HEADLINES
From here, the Report is organized into five main sections:
- In the first, **Headlines**, we offer some observations which we believe are fundamental to how and why corporations approach social responsibility, and build upon the conclusions of our first report;
- The second, **Soundings**, captures much of what was learnt from the regional dialogues which gave us a broader perspective on what CSR means to different people in different contexts;
- Next comes **Practical steps and hands-on tools**, which features an overview of useful ways of tackling a variety of challenges and suggests things that one might “do differently on Monday morning” to help CSR happen;
- In the fourth section, we offer the **WBCSD CSR Navigator**, 12 points to guide a company in its global CSR direction and performance.
- Finally, in our way forward, we pose some **Questions and Queries**, both of implementation and policy which we believe should be asked and answered in the continuing dialogue and debate.

### SOUNDINGS
a regional perspective

- The second, **Soundings**, captures much of what was learnt from the regional dialogues which gave us a broader perspective on what CSR means to different people in different contexts;

### PRACTICAL STEPS
and hands-on tools

- Next comes **Practical steps and hands-on tools**, which features an overview of useful ways of tackling a variety of challenges and suggests things that one might “do differently on Monday morning” to help CSR happen;

---

1 The working group is composed of 85 member companies and is chaired by Richard Holme (Rio Tinto) and Phil Watts (Royal Dutch Shell Group). It is responsible for guiding the day-to-day initiatives and the Co-chairs provide the leadership and strategic vision.

**HEADLINES**

Our activity over the past months has significantly broadened and deepened our understanding of the many facets of CSR. Here are some of the most relevant findings: “the headlines”.

**A recognition that:**
- CSR is essential to the long term prosperity of companies as it provides the opportunity to demonstrate the human face of business – a vital link to society in general and, in particular, to the communities in which businesses are located.
- the value of creating practical partnerships and dialogue between business, government, and organisations cannot be underestimated;
- companies should say what they stand for and demonstrate it in action.

---

**Headline #1**

CSR as the human face of business

In our first Report we concluded that a coherent CSR strategy, based on integrity, sound values and a long-term approach offered clear business benefits. The benefits then perceived are increasingly obvious to many corporate leaders: a better alignment of corporate goals with those of society, and indeed of the companies’ own managers; maintaining the company’s reputation; securing its continued license to operate, and reducing risk and its associated costs. In other words, taking the longer term view. Since that Report, the key conclusions of which are set out in “Setting the scene”, the debate on globalization has intensified, bringing further compelling reasons for companies to focus on CSR. Today, therefore, our business-case argument has expanded to include the following points:

Concerns associated with globalization, free trade and foreign direct investment continue to be raised and could threaten investment and economic growth. These concerns often center on the belief that social and environmental standards are being compromised, or that investment decisions are insensitive to local needs and circumstances. CSR provides businesses with an opportunity to demonstrate that this does not have to be the case. Good CSR policies based on partnerships with host countries and communities and on implementing the principles of sustainable development can demonstrate a local commitment on the part of even the largest global company.

CSR represents the human face of the highly competitive world of commerce. Perception of this human face is a vital and necessary part of society’s willingness to accept the significant and sometimes (at least in the short-term) difficult changes brought about by elements of globalization.

If international companies set policies, however well intentioned, from remote corporate headquarters without also fostering partnerships and local involvement in the communities in which they do business, they are likely to fuel feelings of alienation and suspicion. Business today simply cannot afford such alienation since those very communities are vital to a company’s continued commercial success. Business needs a stable social environment that provides a predictable climate for investment and trade.

CSR is the means by which business contributes to that stability rather than detracting from it. By establishing and maintaining a corporate agenda which recognizes social priorities and is tailored to meet them, business displays its human face to consumers, communities and opinion leaders. Training, the transfer of skills and expertise, new technological solutions, contracting of services, helpful infrastructure development, as well as community social and health programs and a clear commitment to human rights can all demonstrate the will to be a good local citizen and to help create sustainable livelihoods. By their social contribution, companies show the human face of globalization and reduce fears about the negative impacts of international business on local life.

For any company, giving a high priority to CSR is no longer seen to represent an unproductive cost or resource burden, but increasingly, as a means of enhancing reputation and credibility among stakeholders – something, on which success or even survival may depend. Understanding and taking account of society’s expectations is quite simply enlightened self-interest for business in today’s interdependent world.

---

**Headline #2**

Global principles – local partnership are integral

Different businesses in different sectors inevitably put emphasis on different aspects of CSR. For example, a natural resource business may emphasize community engagement, whereas, a retailer may focus on supply chain management. As our dialogues demonstrate, different societies around the world have varying expectations and cultures. This means that universal codes – the “one-size-fits-all” approach – may not provide the answer.

We believe that companies should declare their own values and talk them through in open and transparent dialogue with those who have a stake in, or are affected by, their operations – whether they be central and local governments, IGOs, NGOs or local communities. External codes, guidelines or principles can provide a helpful backdrop or alignment, but there is no substitute for internal judgement as to what constitutes a constructive and practical partnership. Dialogue and understanding can lead to useful partnerships, based upon a clear appreciation of each other’s expectations.

---

**Headline #3**

Say what you stand for. Demonstrate it in action. Make a difference.

Too many discussions about the meaning of corporate social responsibility are plagued with careful qualifications. The language is tentative, the objectives obscure. Participants in the debate can no longer afford the luxury of ambiguity. Meaningful change is necessary. Companies must move from being “observer and victim” to being “shaper and advocate”.

We believe that companies need to be clear about what they stand for and that they should speak openly and directly about what are a priority in your operations, make a commitment. Put some muscle behind what you stand for and back it up with action.

We see this pro-active stance as an important extension to our earlier thinking on the importance of being responsive to local and cultural differences when implementing global policies. Our global consultations reinforced our conviction that being responsive means demonstrating responsibility and local sensitivity in action.

In conclusion, our message is: Determine your values, then demonstrate them through specific initiatives. What matters is what you do and the difference you make.

---

"Our position as the world’s leading media and entertainment company could not have been reached – and could not have been sustained – solely from business success. It rests equally on our tradition of social responsibility and community involvement. At the core of this enterprise is the determination to make a difference as well as a profit.

SOUNDINGS
a regional perspective

An important element of the WBCSD’s work on corporate social responsibility has been to explore what the issue means, both to business itself and to a wide spectrum of non-business stakeholders. We felt we had already gathered a reasonably good grasp of the general European and North American perspectives on CSR based on our first dialogue in The Netherlands. But what were people saying about the issue in other parts of the world? We needed perspectives which reflected more local or community-based priorities.

Subsequently, we have discussed these issues with business and non-business stakeholders in seven other countries around the world. Our aim was to understand local perspectives better and gauge whether business is on the right track. In the following pages, we capture highlights from these encounters. (Please note that care was taken to accurately reflect people’s comments. However, such an activity is subject to numerous interpretations and generalizations.)

It is significant that people are talking about the role of the private sector in relation to a social agenda and they see that role as increasingly linked to the overall well-being of society.

There was widespread understanding and support for the concept of responsible companies engaged with the well-being of societies in which they operate. Predictably, the priorities for action differed, according to the perception of local needs. What, then, did people see as local priorities? Based on our regional dialogues, it can be summarized as helping to meet the needs of local society.

Does the definition of CSR pass muster?

“Corporate social responsibility is the continuing commitment by business to behave ethically and contribute to economic development while improving the quality of life of the workforce and their families as well as of the local community and society at large.”

USA
“CSR is about taking personal responsibility for your actions and the impacts that you have on society. Companies and employees must undergo a personal transformation, re-examine their role, their responsibilities and increase their level of accountability.”

THE NETHERLANDS
“CSR is about making a leadership commitment to core values and recognizing local and cultural differences in implementing global policies. It’s about improving understanding of the UN Convention on Human Rights and the ILO Rights at Work.”

THE PHILLIPINES
“CSR is about business giving back to society.”

THAILAND
“CSR must be locally relevant and meaningful only if backed up with action.”

TAIWAN
“CSR is about helping to meet people’s needs”

The above definition was developed in 1998 for our first CSR dialogue in The Netherlands. During the round of global dialogues, we invited participants to discuss this definition. The following emphases emerged:

In Taiwan, it was felt that the definition should address:
- benefits for future generations
- environmental concerns (damage prevention and remediation).

In the USA, people said:
- include more emphasis on the role of the individual
- reflect the need for greater transparency
- the term “economic development” does not adequately capture the breadth of the economic role of business in society.

In Ghana, it was said that the definition should mention the notion of:
- a global perspective which respects local culture
- building local capacity leaving a positive legacy
- empowerment and ownership
- teaching employees skills and enabling communities to be self-sufficient
- filling in when government falls short
- giving access to information
- partnerships, because CSR does not develop in a vacuum.

In Thailand, people said it should try to capture:
- the concept that the bigger the company, the greater the obligation
- the importance of environmental mitigation and prevention
- the need for transparency
- the importance of consumer protection
- awareness of and change in people’s attitudes towards the environment
- the relevance of youth and gender issues.
Dialogue participants encouraged low cost technology transfer schemes and further exploration of self-monitoring as a means of improving environmental performance, particularly in parts of the world where government infrastructure and enforcement was lax.

Community involvement
Dialogue participants talked about the importance of company involvement and investment in the local community. They felt as if they are part of the community but until the rest of the community accepts them, there is much work to be done.

Company relations with suppliers and contractors was not always deemed a priority among the dialogue participants. In Asia, one of the key CSR issues was improving the exchange of knowledge, technology and ideas between suppliers and companies.

Capturing additional thinking
We were told that there were some important issues missing from our initial list. They included:

- Human rights
- Employee rights
- Environmental protection
- Community involvement
- Supplier relations.

What, then, was the reaction to this list of issues during the latest round of dialogues? Did participants in the regional events also judge these issues to be priority concerns? We summarize below the key messages and regional themes.

Human rights
In the Philippines, it was proposed that it should focus on:
- determining the real needs of stakeholders
- defining ethical behavior
- partnerships
- a visionary and leading role.

In Brazil, it was stressed that:
- all businesses, communities and stakeholders are responsible for sustainable development
- business should pursue high ethical standards both within their operations and within the broader community.

In Argentina, participants felt that:
- CSR should stress business commitment and sustainable economic development
- stakeholder participation was essential.

And so, what can we conclude? Our original definition was reasonably consistent with the regional inputs but can be improved so that it now reads:

“Corporate social responsibility is the commitment of business to contribute to sustainable economic development, working with employees, their families, the local community and society at large to improve their quality of life.”

What key issues does CSR include?

In our first Report, the following five topics emerged as priority areas:

- Human rights
- Employee rights
- Environmental protection
- Community involvement
- Supplier relations.

What key issues does CSR include?
Where does CSR fit into the business agenda?

We asked if corporate social responsibility was on the business agenda and, if so, how was it being dealt with by companies. The response from participants in the regional dialogues was that CSR is an old concept but a new term. More significantly, not everyone thought CSR was high on the business agenda. Many thought it was already important today but was likely to become even more relevant in the future. Even those who regard CSR as a cost in the short term nevertheless regard it as a wise investment in the long term.

There were a few specific regional variations which provide a more local perspective:

- **Taiwan**: CSR was not necessarily high on the corporate agenda. Why? Participants felt that government should take the lead role while also encouraging business to be involved. Small and medium-sized enterprises (SME) involvement has traditionally been determined by CEO leadership rather than by external pressure. People want to see long-term commitment to the local community. Finally, companies should consider ways to improve their image because business is not generally highly regarded.

- **USA**: CSR was high on the corporate agenda. Why? Participants believed that pressure from NGOs calling for more reporting and disclosure had elevated the importance of CSR. Perhaps it was not about CSR per se but about the ability to distinguish companies that have been proactive in their social responsibility activities. The idea was to have diversity within the industry and to let the companies define their own boundaries.

- **Ghana**: In Accra, we were told that CSR was not high on the business agenda. Why? It was thought that CSR is too expensive and that there was little outside pressure on companies to encourage them to take the initiative on it. Lack of government control and involvement was also cited as a reason for CSR having a lower priority. However, it was frequently said that business involvement in CSR would enhance companies’ reputation and build trust among the public.

- **Thailand**: Our meetings revealed that CSR did not have wide recognition as a business concept in Thailand. Why? Many felt that owing to the economic vulnerability of the private sector, business was forced to be concerned solely with the survival of the enterprise and that social responsibility was more of a luxury item. However, we were repeatedly told that the environment was a major concern for Thai society, as was a desire to increase the awareness of CSR and dedicate efforts to partnerships between NGOs, government, and business.

- **The Philippines**: Those we met with in Manila believed that CSR was a priority issue for business. Why? The private sector has traditionally played an important role in Philippine society, often filling the gaps where government has been weak. The idea was to avoid conflict and provide leadership. Participants stressed the importance of looking to the future and the desire for CSR to move from a charity-based focus to one of more interactive partnerships. Many suggested that the media and advertising were influential means of creating greater awareness of social and environmental issues.

- **Brazil**: Participants told us that CSR was on the agenda of the multinationals who are now promoting the business concept but it had not yet spread into local SMEs. Why? CSR was still regarded as a cost rather than a benefit. People were confused by technical standards and therefore basing their purchasing decisions on other criteria such as the company’s reputation and public image.

- **Argentina**: We were told that CSR was currently gaining media coverage despite multinational corporations (MNCs) preference for keeping a low profile so as not to raise unrealistic expectations. Why? Economic benefits were seen to be indirect and manifested themselves through a better reputation and employee and consumer loyalty.

PRACTICAL STEPS and hands-on tools

Getting started

In this section we attempt to provide an answer to the question: “What do we do differently on Monday morning?” We begin with an overview of practical suggestions and concrete initiatives aimed at assisting managers to make CSR happen.

Keeping in mind that this subject area is growing by leaps and bounds, a comprehensive inventory would be obsolete by the time the ink, even if virtual, were to dry. Indeed, some might wonder why, in view of the plethora of websites, conferences, and consulting services already covering the whole CSR subject, the WBCSD would even try to summarize these issues. Being keenly aware of this, we have tried not to reinvent the wheel but rather to build upon and borrow from existing work whenever possible.

As an important initial step, we suggest you do a “warm-up” and conduct an assessment to determine where your organisation stands on the CSR learning curve. To help you do so, we have designed a process – a self-assessment questionnaire – which allows you to pin-point your present position and future needs. You will quickly see how your awareness, commitment, values, impact assessment and support systems can be translated into action-oriented processes. See appendix 1 for the self-assessment questionnaire.

Building a CSR strategy

Once you have used the self-assessment questionnaire to assess where your company is located on a learning curve, it will be necessary to build a strategy to fill the gaps and bolster other areas. We suggest approaching this in the form of an overarching strategic plan or blueprint that will firmly anchor CSR in the business strategy of the company. Increasingly, companies are now managing their corporate social issues in the same way as they manage any other strategic business issues. The flow chart above illustrates a generic strategic planning process, divided into a few key stages. CSR is not identified as a specific strategic issue, but is incorporated in the range of crucial issues that a company’s overarching strategy must address.

Honing the issues

Next, think about refining your strategic thinking to consider issues more specifically relevant to CSR. As a company moves towards specific actions related to CSR, those actions should at all times be inherent in the overall business strategy described above.

Envisage this as a succession of activities, beginning with simply introducing CSR in your company and progressing to monitoring progress over a given period. The process should be iterative and at all times push the company towards continuous improvement.

As you progress from one phase to the next, there are many tools now available to assist you. They vary from policy reports and detailed decision-making trees to computer software. However, to select the right tools for the job, you need to assess what stage you have reached. For example, use the following list of six phases, which correspond to the flow-chart, right, in order to determine which tools will be most valuable at any particular phase:

1. Introduce: For organizations with little or no experience in addressing CSR, these are tools which can be used to brief senior management and stress why CSR should be taken seriously.
2. Identify: These are tools designed to assist organizations in exploring CSR’s implications on their own business.
3. Position: These are for organizations which are ready to establish their own position on CSR issues and assess it in relation to others in the field.
4. Develop: These tools may be useful during the process of planning and developing a CSR strategy. They could help set priorities and goals and be useful in building internal capacity for tackling CSR issues.
5. Implement: These are for putting CSR strategies into practice.
6. Monitor: Tools for measuring performance, as an input to reporting and strategy review. The emphasis should be on continuous improvement.

Appendix 2 lists some of the tools or resources currently available to support your initiative or thinking, indicating which are appropriate for each of the above six phases.

Stakeholder Footprints

In the first few stages above, we identified the key steps in managing CSR and considered some of the specific tools and resources available as well as the appropriate phase in which these tools are likely to be most useful. We now suggest tightening the focus still further to concentrate on what we believe to be a core consideration – stakeholder engagement.

The essence of corporate social responsibility is to recognize the value of external stakeholder dialogue. Because of this, we place stakeholder engagement at the center of CSR activity. It also depends on understanding the values and principles of those who have a stake in its operations.

Stakeholder Footprints

■ Legitimacy: Is a particular stakeholder group representative of issues which are relevant to your business and accountable to those with a legitimate interest in the way you do business?

■ Contribution/Influence: Does the stakeholder group have a contribution to make in helping you to run your business more responsibly or significant influence on your company’s business and/or on other stakeholders?

■ Outcome: Is the engagement likely to result in a productive outcome in the long run?

Those for whom the answers are “yes” should be considered key stakeholders and have priority in a dialogue. Be prepared to listen to them – they may reveal other stakeholders with valid concerns that you have not identified. By making constructive use of what you hear, your company can devise strategies and plans to avoid conflicts and gain insights which help preserve and enhance your reputation in the marketplace because you are showing concern for the social impact of your activities.
To breathe some life into this matrix, we’ve taken a hypothetical example of a water utility company based in the UK and have shaded various cells in a way that illustrates the perspectives and concerns of that company. The black cells show areas of strong interest, gray illustrates some interest and white indicates areas of weak interest. Keep in mind that each company’s shading on the matrix will be quite different and will depend on such things as its business sector and geographic location. Furthermore, a company’s perspectives and concerns will almost certainly change over time.

**CSR Indicators: equipping yourself for better decision-making**

As we have already remarked, business is increasingly being called to account not only for what it does, but also for how it does it. Companies therefore need to be able to demonstrate, more quickly and with increasing levels of detail, that their operations enhance economic development, ensure environmental protection and promote social equity. Gone are the days of “trust me”. People want proof in the “show me” world.

To be able to demonstrate progress, your company will need a process for determining suitable indicators and a means of measuring performance. There is probably no single set of CSR indicators that will suit all companies at all times. What is needed is a process to identify the indicators that match the social footprint suggested in the previous section. This will produce a set of headline indicators which will be specific to each company, will be relevant to stakeholders and meaningful to the issues a company faces. This process might unfold as follows:

- **Indicator focus**: Establish the social footprint using the CSR issues matrix and look for indicators which relate to the black cells – this will provide your headline indicators.

- **Selecting the indicators**: Look for indicators that inform your company decision-making; respond to stakeholder concerns; are supported by robust information systems; and are regularly reviewed.

- **Ensuring quality**: Once you have identified the relevant indicators, each needs to be tested to ensure that it is useful both to internal decision-makers and to stakeholders. Indicators should be comprehensible, comparable, timely and verifiable.

- **Implementing and using sets of indicators**: It is unlikely that a single indicator will tell the whole story on a particular social issue. A set of indicators is more likely to communicate the issue effectively. The following three principles increase the usefulness of indicators. Indicators should:
  - be capable of demonstrating trends, and;
  - be communicable to a range of stakeholders.

In an attempt to pull the various pieces together, the matrix on pp18-19 illustrates how indicators can begin to reflect CSR practice. This matrix provides indicators which, taken together, shed light on CSR performance. The vertical axis shows the key CSR issues while the horizontal axis shows the key stakeholders. Each cell shows a relevant aspect of CSR together with suggestions for indicators which would describe progress.

**CSR Reporting: how to tell the story**

Published corporate social reports are, with a few exceptions, a relatively new phenomenon. However, companies’ experience in the parallel field of environmental reporting suggests that there are important internal benefits to be derived from the process of preparing and disseminating reports to both internal and external audiences.

Primarily, reports are a tool to help companies convey how their business is being managed effectively. Further benefits include helping raise awareness of the issues inside the company and alerting employees to the company’s performance. CSR reports signal to managers and employees that their company takes its social values and policies seriously. It is important to emphasize that a CSR report should focus on the social footprint of a company as discussed above. This approach allows a focus on what is critical in your company. Our work has generated some data and key characteristics that might be included in a report on social performance. They are listed in Appendix 3.

However, caveat emptor. There are many ways to approach reporting and not all types of reporting activity are suitable for all companies. Social reporting is recommended where it furthers a company’s strategic vision, where the company’s culture and management system support such an effort and where reporting is viewed as an effective route to further engagement. So far, most CSR reporting assumes a relatively well-informed audience of opinion-formers. Those preparing CSR reports might therefore usefully consider designing the report to capture an audience beyond those with specialized knowledge. In particular, reporting directly to the local communities most affected by the company’s presence, should be considered. The means by which this type of information is passed should also be carefully examined. The medium chosen should meet identified needs, and different or multiple approaches may be appropriate according to circumstances. However, the importance of regular, open and honest reporting together with local dialogue was often repeated in our meetings and interviews.

As in financial and environmental reporting, there needs to be some assurance that the information reported is reliable. This is an area where experimentation is under way. We suggest that CSR reports include information on assurance processes.

Within a few years, it is probable that reports on all facets of corporate performance will be published on the Internet in “real time”. This highlights the need to establish systems for ensuring that information is provided in a timely and useful way. It also highlights the need to establish systems for ensuring that the information is updated on a regular basis. This is an area where experimentation is under way. We suggest that CSR reports include information on assurance processes.

For more detailed information on reporting initiatives, we suggest a review of the following resources:

- Institute of Social and Ethical Accountability: AA1000 Standards - www.accountability.org.uk
- The Social Reporting Report, published by SustainAbility - www.sustainability.co.uk

A number of companies are now reporting on their CSR policies and activities. Some produce “stand alone” social reports, while others refer to them as community reports or sustainability reports. By way of example, we summarize in chart form a range of approaches taken and data provided in the reports produced by a selection of companies on the WBCSD working group. Please visit the CSR site on the WBCSD website for some of these details.
## CSR Indicators: Equipping you for better decision-making

### Stakeholders

#### Company owners
- Shareholders, investors

#### Employees
- Employee satisfaction, turnover

#### Customers
- Customer satisfaction, loyalty

#### Business partners
- Supplier satisfaction, quality of goods/services provided

#### Suppliers
- Compliance with contracts, payment terms

#### Competitors
- Market share, competitive position

#### Government Regulators
- Compliance with regulations, fines

#### NGOs/Pressure groups
- Public perception, advocacy campaigns

#### Communities
- Social impact, environmental footprint

### CSR Indicators

<table>
<thead>
<tr>
<th>CSR Indicator</th>
<th>Company owners</th>
<th>Employees</th>
<th>Customers</th>
<th>Business partners</th>
<th>Suppliers</th>
<th>Competitors</th>
<th>Government Regulators</th>
<th>NGOs/Pressure groups</th>
<th>Communities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Values and Governance</td>
<td>Regulation strategy/profile and turnover of shareholders, investors perception</td>
<td>Adherence to values, number of calls to hotline, employee perception</td>
<td>Transparent/about values, customer awareness/satisfaction</td>
<td>Formulation of values in relationships, occurrence of values clauses in contracts</td>
<td>Code of conduct, supplier ratings – incidence of code breaches</td>
<td>Integrity, comments/actions – supplier satisfaction</td>
<td>Values being part of governance, stakeholder perception</td>
<td>Disagreements over responsibility, complaints, public attention/dispute</td>
<td>Ethical imperialism, stakeholder perception</td>
</tr>
<tr>
<td>Regulations and Controls</td>
<td>Conflicts between values and trends, incidence of unforeseen events</td>
<td>Use/abuse of perks, incidence of disciplinary procedures</td>
<td>Meeting specifications, incidence of customer complaints</td>
<td>Open/cover dealings, partner perception</td>
<td>Presence of bribery, incidence of disciplinary procedures</td>
<td>Restrictive practices, incidence of referrals to regulatory audits</td>
<td>Compliance/non-compliance, incidence of fines, regulatory audits</td>
<td>Use/abuse of legal protection, stakeholder perception, public attention/dispute</td>
<td>Compliance/non-compliance – with planning regulations, incidence of infringements</td>
</tr>
<tr>
<td>Business Operations</td>
<td>Alignment of operations with values, shareholder perception</td>
<td>Performance appraisal, % of suppliers assessed on corporate social responsibility criteria</td>
<td>Appropriate information, customer satisfaction, demonstrated reduction in customer requests/concerns</td>
<td>Opreme, supplier satisfaction, breaches of contract</td>
<td>Clarity about ongoing relationships, stakeholder perception</td>
<td>Use of media, stakeholder perception</td>
<td>Reporting, complaint standards, standard certifications</td>
<td>Appropriate measures/indicators, stakeholder acceptance</td>
<td>Disclosure of information, clarity and accessibility of information (by fact/survey results)</td>
</tr>
<tr>
<td>Accountability and Disclosure</td>
<td>Rigor of reporting trends in shareholder feedback, % of information sent to stakeholders</td>
<td>Data protection, incidence of employee complaint, claims and litigation</td>
<td>Appropriate information, customer satisfaction, demonstrated reduction in customer requests/concerns</td>
<td>Opreme, partner satisfaction, breaches of contract</td>
<td>Clarity about ongoing relationships, stakeholder perception</td>
<td>Use of media, stakeholder perception</td>
<td>Reporting, complaint standards, standard certifications</td>
<td>Appropriate measures/indicators, stakeholder acceptance</td>
<td>Disclosure of information, clarity and accessibility of information (by fact/survey results)</td>
</tr>
<tr>
<td>Human Rights</td>
<td>Compliance with international codes, existence of policy statement, stakeholder perception</td>
<td>Respect for ethics/local culture, license to operate withdrawn, protect incidents, boycotts</td>
<td>Monitoring human rights in the supply chain, customer perception, boycotts, third-party review in supply chain</td>
<td>Partnership standard regarding human rights, comparability rating</td>
<td>Equity of opportunity/profit of suppliers</td>
<td>Competitive behavior, adherence to industry standards</td>
<td>Investment criteria, level of adherence to human rights regulations</td>
<td>Giving voice to pressure groups, stakeholder perception</td>
<td>Adequacy of disaster planning/response, no. of incidents/accidents, results of third-party audit</td>
</tr>
<tr>
<td>Employee Rights/Working Conditions</td>
<td>Reliability of pay-earning process</td>
<td>Freedom of association, frequency of works committee meetings, training and development</td>
<td>Child labor, no. of employees under 15/18 in hazardous work</td>
<td>Relative standard, performance of partner against corporate benchmarks</td>
<td>Trip contracts, incidence of complaints</td>
<td>Bonded labor certification against standard that prohibits bonded labor e.g. SIA B03</td>
<td>Adherence to standards, level of adherence to human rights regulations</td>
<td>Sweat shops pressure group surveys</td>
<td>Support for community education programs, level of investment (time and/or money)</td>
</tr>
<tr>
<td>Business Contract</td>
<td>Types/quality of alliances formed, satisfaction of non-executive directors</td>
<td>Clarity of contractual terms, stakeholder perception</td>
<td>Contract terms, customer satisfaction, customer retention</td>
<td>Use/abuse of power, supplier satisfaction, longevity of partnerships</td>
<td>Payment terms, complaints, surveys of supplier satisfaction</td>
<td>Cartels/occurrence of industries investigations</td>
<td>Use/abuse of monopolies, stakeholder perceptions, incidence of investigations</td>
<td>Ethical sourcing, adherence to voluntary codes (e.g. EITI)</td>
<td>Market power, critical community, market share, market profile</td>
</tr>
<tr>
<td>Product Impact</td>
<td>Unethical products, inclusion rate in ethical funds</td>
<td>Harmful process and substance accident rate, lost-time due to injury, health and safety procedures</td>
<td>Labeling, customer satisfaction, breaches of government industry regulations, market share</td>
<td>Product recall efficiency, speed and success of product recalls and services superb</td>
<td>Product stewardship, performance against industry benchmarks, e.g. responsible care chemicals process</td>
<td>Product stewardship, performance against industry benchmarks, e.g. responsible care chemicals process</td>
<td>Safety of products, incidence of NGOs/regulated targeting</td>
<td>Harmful substances, GHG emissions, release to land and water of non-product output</td>
<td>Long-term commitment to community, investment, trends in local investment</td>
</tr>
<tr>
<td>Social Impact/Investment</td>
<td>Meeting guarantees, complaint level</td>
<td>Employee involvement, % of employees volunteering for corporate community investment projects</td>
<td>Spend on cause-related marketing, market share</td>
<td>Disclosure of issues of issues e.g. impact of site closure, partner satisfaction/complaints</td>
<td>Preparation of local suppliers, contractors</td>
<td>Disclosure of issues e.g. impact of investment, re-employment levels</td>
<td>Joint programs, stakeholder perception</td>
<td>Adequacy of measures/indicators and monitoring, stakeholder perception</td>
<td>Long-term commitment to community, investment, trends in local investment</td>
</tr>
<tr>
<td>Impact on other species</td>
<td>Impact of investment, impact assessment</td>
<td>Ethics of animal testing, mentioned level, employee concerns</td>
<td>Appropriateness of farm practices, number of campaigns boycotts, quantity of organic products sold</td>
<td>Values shared, no. of partnerships accepted sanctioned or rejected</td>
<td>Conditions of animal husbandry, breaches of government industry regulations</td>
<td>Transparency about research findings, conditions of animal husbandry, breaches of government industry regulations</td>
<td>Quality of research, quality of research, compliance with government standards</td>
<td>Quality of conservation programs, stakeholder perceptions, comments of independent expert</td>
<td>Quality of impact assessment, third-party review results</td>
</tr>
<tr>
<td>Impact on Environment</td>
<td>Disaster planning/ risk assessment, incidence of accident/ injuries, % of employees trained</td>
<td>Resource consumption, quantity of resources saved through employee action</td>
<td>Customer awareness about product, use, disposal trends in customer behavior</td>
<td>Environmental standards, % of partners with external certification of EMS recognized against independent standard</td>
<td>Promoting high standards in suppliers, % suppliers adhering to environmental standard</td>
<td>Commercial exploitation, market share, monopoly, investigations complaints</td>
<td>Meeting standards, third party ratings and awards</td>
<td>Effective use of expertise, stakeholder perceptions, investment in environmental research</td>
<td>Impact on local environment, air pollution</td>
</tr>

</table>
CSR NAVIGATOR

The WBCSD working group on corporate social responsibility offers the following navigator to guide companies on their journey towards implementing CSR. This navigator is both a tool and a conceptual approach and should be applied in light of each company’s assessment of its own particular situation. It indicates direction and demands vision, but does not dictate the speed of progress. It is flexible enough to respond to individual company challenges and dilemmas. The navigator emphasizes that the vigor with which a particular company pursues its vision on CSR is specific to that company’s individual location – its geography, industrial sector, etc. – and should be tailored to what works best for the company. The WBCSD navigator consists of distinct reference points which can be used along a company’s CSR journey.

**Determine your “magnetic north”**

Companies should determine and articulate their CSR direction – their CSR “magnetic north” so to speak – at the start of their journey. Repeatedly, our global consultations reinforced this simple message. Through the terminology might be different – people variously referred to values, ethics, religion, tribal custom or codes of conduct – the overriding message is clear: determine and articulate your company’s vision and values, your corporate “magnetic north.” Tell people what you stand for and what you are prepared to be judged on. If you fail to do this, others will tell you what you should do. Determining a company’s “magnetic north” is neither easy nor straightforward. However, it is essential if the company is to address the complex and expanding business/social agenda emerging in the new millennium. So the message is: start now. Involve your best people throughout your organization. Demonstrate top-level involvement and commitment. If you don’t, your company will fall behind, and any attempt to embark on the CSR journey will be longer and harder.

**Build-in the strategic business case**

Integrating social responsibility into an overall company strategy demonstrates your company’s readiness to ensure that social concerns are an integral part of your business strategy. A holistic approach to the challenges we face in our companies is usually the most productive, and CSR can managed most effectively if woven into the philosophical and operational fabric of the company. Approach CSR as you would any investment: look for positive returns or reduction of risk. Seek buy-in from managers, supervisors and employees. Work with them, provide support and encourage them to recognize the good business sense of a CSR strategy.

**Focus on individuals**

Overall, CSR reaches out to the collective entity of stakeholders – shareholders, employees, communities, NGOs, consumers, partners, etc. But to be truly effective, CSR needs to take account of the implications for individuals. Determine the ways for the individual citizen, consumer, employee, manager, etc., to contribute to corporate social responsibility as well as the means for determining individual accountability.

**Determine your legacy – foster competence and capacity**

Install an ethic of education and learning, and institute processes to foster it: this is how you focus on long-term sustainability. Strive to leave as small an industrial footprint as can reasonably be expected but as large a local contribution and sustained livelihood legacy as you can. It is no longer enough to provide a salary and pay taxes. People want to learn how to build a better future.

**Put employees first – assets, agents, and ambassadors**

In the quest to enhance shareholder value, be prepared to say that your employees are the number one consideration among a range of other stakeholders. This doesn’t imply that other stakeholders are not important but CSR includes decisions about setting priorities, facing dilemmas and making trade-offs. Community groups, regulators, NGOs and employees are all vital when addressing CSR. But, based on our global consultations, employees and employee relations matter most when addressing CSR. Transform your workforce into active agents for change. Convince them that socially responsible business practices are central to a company’s continued success. Encourage diversity and open exchange of ideas. Provide the skills training to make jobs more portable. Collectively, your employees can be the greatest driver for promoting good CSR practice.

**Know your neighbor: community and culture**

Understand and define who and what your community is and assess its implications for your operations. Invest in identifying what makes communities different or similar. Explore how local culture, language and religions complement or conflict with management approaches. Show respect for differences as well as similarities.
Making Good Business Sense

Corporate Social Responsibility needs further development and definition. We do not pretend that this Report and its predecessor are more than milestones on a long and important journey. We set out below some of the questions which need to be asked and answered, as an invitation to all those involved in the CSR debate.

Questions of principle

- What are the respective roles of government and business in the provision of social, educational and health services?
- What is the extent of business responsibility for human rights breaches in a country beyond the company’s immediate area of operations?
- How far along the supply chain does the responsibility of a business extend? Similarly, how far forward should a company look?
- How do we distinguish CSR from corporate philanthropy, patronage, sponsorship and donations?
- What is the distinctive corporate contribution to the poverty/sustainable livelihood problem?
- What change, if any, does this approach involve to employer/employee relations?

Questions of implementation

- How can CSR best be embedded in companies’ corporate governance, management objectives, incentives and reporting, so that it is a core characteristic of all their operations?
- How can on-the-ground partnerships between companies, central and local government, IGOs, NGOs, local communities and others best be formed and sustained, given that each potential partner has different goals, perspectives and cultures?
- How should differing environmental, social and economic development aims be balanced in particular decisions on the ground?
- How can companies best contribute to skills, know-how and capacity building in developing countries?
- How can companies get all their employees involved in and committed to CSR?
- How should companies measure and report on performance in these softer and less well-defined areas?
- How do we spread the word about CSR from region to region, sector to sector, and company to company?
- How can business best contribute to the on-going debate?

Debate and dialogue – establish a system and process

Focus on the process for systematic and transparent dialogue. Use this to understand the impact of your company on people’s lives. This is best done early with an attitude of constructive engagement. Inaction means losing contact and becoming out-of-touch with those that matter.

Questions of implementation

- How can CSR best be embedded in companies’ corporate governance, management objectives, incentives and reporting, so that it is a core characteristic of all their operations?
- How can on-the-ground partnerships between companies, central and local government, IGOs, NGOs, local communities and others best be formed and sustained, given that each potential partner has different goals, perspectives and cultures?
- How should differing environmental, social and economic development aims be balanced in particular decisions on the ground?
- How can companies best contribute to skills, know-how and capacity building in developing countries?
- How can companies get all their employees involved in and committed to CSR?
- How should companies measure and report on performance in these softer and less well-defined areas?
- How do we spread the word about CSR from region to region, sector to sector, and company to company?
- How can business best contribute to the on-going debate?

Pursue smart partnerships

Who would argue with establishing partnerships? For many companies this has become almost routine. Strategic collaborations with clear objectives are an essential component for any company looking to address corporate social issues and we encourage companies to foster such relationships. However, recognize partnerships for the sake of publicity undermine credibility and dilute the effect of valuable collaborations. Partnerships that provide cover for inaction or have dubious objectives will sap peoples’ energy and waste time and money. Involve your employees, consult stakeholders and look for win/win situations.

Remember reputation matters

Reputation is a key business asset and should be carefully protected. That is part of the business case for investing in CSR, which provides the framework in which a company does, and is seen to be doing, the right thing for reasons other than immediate financial returns. Transparency and credibility will build a strong reputation over time, and generate loyalty which can be relied upon in time of crisis.

Be a good guest, but let your story be heard

Your company is a guest in various communities and should behave accordingly. Show respect and consideration for your hosts. At the same time, find the appropriate way to communicate with them openly about your contributions to society. That open relationship will also be an asset if problems arise.

Measure and account for what you do

Take a positive and proactive attitude to measuring and reporting progress. Whatever method your company selects, the important thing is to be prepared to meet demands for measurement and accountability. Signals indicate that these demands will increase in the years ahead. If you are not properly equipped to manage this challenge, your credibility and reputation will suffer.

Handle with care information, knowledge and technology

The results of the technology revolution and the implications of our knowledge-based economy are only just beginning to be apparent but they are bringing profound change on a global scale. Communications technology offers great potential for inclusion and education and new ways for companies to communicate their philosophies and accomplishments. But the frontiers of new technology also pose challenges; they can exclude and are open to exploitation, and careful thought is needed to safeguard against this.

Questions of principle

- What are the respective roles of government and business in the provision of social, educational and health services?
- What is the extent of business responsibility for human rights breaches in a country beyond the company’s immediate area of operations?
- How far along the supply chain does the responsibility of a business extend? Similarly, how far forward should a company look?
- How do we distinguish CSR from corporate philanthropy, patronage, sponsorship and donations?
- What is the distinctive corporate contribution to the poverty/sustainable livelihood problem?
- What change, if any, does this approach involve to employer/employee relations?

Questions of implementation

- How can CSR best be embedded in companies’ corporate governance, management objectives, incentives and reporting, so that it is a core characteristic of all their operations?
- How can on-the-ground partnerships between companies, central and local government, IGOs, NGOs, local communities and others best be formed and sustained, given that each potential partner has different goals, perspectives and cultures?
- How should differing environmental, social and economic development aims be balanced in particular decisions on the ground?
- How can companies best contribute to skills, know-how and capacity building in developing countries?
- How can companies get all their employees involved in and committed to CSR?
- How should companies measure and report on performance in these softer and less well-defined areas?
- How do we spread the word about CSR from region to region, sector to sector, and company to company?
- How can business best contribute to the on-going debate?
Self-assessment questionnaire

Answer this questionnaire to gauge now well your company is engaging CSR.

VALUES IMPLEMENTATION
The processes for ensuring adherence to corporate values

- There is a code of conduct
- The values are included as part of employee training
- The values are included in the reward process
- The business objectives and processes are checked for alignment with values

STAKEHOLDER ISSUES
Those matters which stakeholders believe a company influences

- The company has identified its stakeholder groups
- The company has determined the nature of its relationship with the stakeholder groups
- The issues relevant to the company and its stakeholder groups have been identified
- The issues have been modified/confirmed through dialogue with its stakeholder groups

IMPACT ASSESSMENT
Aessment of the direct and indirect consequences of a company’s activities

The company has assessed the social and ethical impacts of its:

- Products/Services
  - past
  - present
  - planned
- Business operations
  - past
  - present
  - planned

FORMULATE POLICY
CSR policy is the set of principles which inform and guide the implementation of a corporate social responsibility strategy in a company

- The company has formulated a CSR policy
- The policy was formulated in consultation with stakeholder groups
- The policy has been communicated to employees
- The policy is published and available to the public

PROGRAMMES/TARGETS
The CSR program is the plan for implementing CSR policy, and will where applicable, include targets to achieve performance improvement

- A program for monitoring CSR policy has been established
- Targets and time scales for CSR improvement have been identified and set
- The program and targets cover all of the issues identified through stakeholder dialogue

MONITOR/MEASURE PERFORMANCE
The processes and measures by which performance is assessed (against targets as applicable)

- Indicators have been identified which measure performance against targets
- Indicators have been defined in consultation with stakeholder groups
- The indicators have been checked to ensure that they are appropriate to the issues
- CSR performance is monitored by management and the Board

REPORT AND COMMUNICATE
The various means by which a company’s approach to CSR and its performance are conveyed to stakeholders

- Progress in implementing CSR programs and achievement of targets is communicated to:
  - Employees
  - The public
  - Other stakeholder groups
- The reports fully address all of the issues identified in dialogue with stakeholders
- The company’s performance with respect to its values, issues and targets is published:
  - As a hard copy report
  - On the Internet

INDEPENDENT VERIFICATION
The process of independent review to provide assurance that company reporting fairly represents corporate activity

- Published reports are subject to external, independent verification
- The verification assures:
  - Completeness of published reports
  - Accuracy
  - The rigor of support systems

REASSESSMENT
The process by which a company continuously reviews and updates CSR strategy and actions taking account of stakeholders’ changing expectations

- The company reviews and re-assesses:
  - Vision, values, issues, programs and targets in the light of performance
  - This review is undertaken with stakeholders
  - The programs and targets are modified as a result of this process

SUPPORT SYSTEMS
The part of the overall management system which includes the organisational structure and processes for supporting the management, measurement and auditing of CSR performance

- There is a system for:
  - Collecting stakeholder input
  - Analysing
  - There is a system for collecting and analysing data relevant to CSR programs and targets

- There is an internal audit program which covers:
  - Values support systems
  - CSR support systems
  - CSR performance
  - The findings of the audits are reported to the Board/Committee

### Key characteristics of social reports

Please note that this is only an example of what is currently included in some social reports.

1. **Organization Profile**
   - Information providing a context for the report
   - Number of employees
   - Number of locations
   - Countries in which company operates
   - Main lines of activity
   - Diversity/equal opportunities
   - Freedom of association/collective bargaining
   - Wages
   - Hours of work
   - Health and safety

2. **CSR Approach**
   - The impact of the business on society
   - The scope and status of the company’s CSR policy
   - What objectives?
   - What key commitments? Example: To UN Conventions
   - Board involvement and commitment
   - Accountability
   - Systems to implement policies, including business ethics
   - Training/awareness raising
   - Key CSR issues for the company – and progress made in addressing these
   - Relationship to environmental/sustainable development policy
   - Benchmarking performance

3. **Employees**
   - Policies and actions on:
     - Diversity/equal opportunities
     - Training
     - Freedom of association/collective bargaining
     - Wages
     - Hours of work
     - Job security
     - Contract labour
     - Health and safety

Acknowledgements

I WOULD LIKE to extend my appreciation to the all the members of the WBCSD Working Group on Corporate Social Responsibility. This was an ambitious project and could only have succeeded with the wisdom and support provided by the many member companies and individual contributions over the past two years.

This team effort was led by our co-chairs Richard Holme, (Lord Holme of Cheltenham CBE, Special Advisor to the Chairman of Rio Tinto) and Phil Watts, (Group Managing Director, Royal Dutch/Shel Group). Your vision and leadership on corporate social responsibility have moved the agenda far beyond our expectations and will provide an important benchmark for future initiatives. Behind every successful co-chair there is usually a willing and able Lason Delegate. In this situation we were rewarded with the dedicated efforts of Shaun Stewart, Rio Tinto and Richard Syles, Shell International. Their hands-on approach combined with can-do attitudes and an unlimited sense humor have set new standards for future WBCSD work.

A few individuals made uniquely valuable contributions by assisting us through direct participation in our global dialogues and/or assuming a leadership role in contributing to our research and writing. Warmest thanks to: Jim Lamb (Severn Trent), Judith Mullins (General Motors Corporation), Maria Emilia Corea (BCSD Colombia), Peter White and George Carpenter (Procter & Gamble) Robin Aspin (Shell International), Anne War (Unilever), Kathy Garden (Fletcher Challenge) and Francois Kaisin (Suez Lyonnaise des Eaux).

Our regional network played a vital role and we are especially grateful to Raimundo Florin (BCSD Argentina), Fernando Almeida (BCSD Brazil), Grace Favila (Philippine Business for the Environment), Niven Huang (BCSD Taiwan) and Tonggoj Onchon (BCSD Thailand). Also, thanks to The Reverend Leon Sullivan and the International Foundation for Education and Self Help for their assistance with our dialogue in Ghana.

The WBCSD Secretariat played an important role in mobilising, organising and pulling this effort together. Mike Wright provided superb project management during his one year secondment with us here in Geneva. Mike’s efforts was supported by Stephanie Handford who, along with Marcel Engel ran our dialogues with skill, finesse and a tremendous amount of diplomatic acumen. Finally, many thanks to Margaret Raherty who oversaw the project, drafted the report and generally convinced and cajoled the initiative into a success.

Bjorn Stigson
President, WBCSD
Process note

WBCSD reports, such as this document, are released in the name of the WBCSD. Each publication is the product of a Working Group, comprising executives of member companies, mandated by the Council to address a particular topic, often drawing on the advice of internationally renowned experts.

Each Working Group is chaired by Council Members, who lead the clearance process, which includes the review of the text by all member and the final approval by the Executive Committee. This process ensures that each document represents the majority view of the WBCSD. However, it does not mean that every member agrees with every word.

About the WBCSD

The WBCSD is a coalition of 120 international companies united by a shared commitment to the environment and to the principles of economic growth and sustainable development. Its member are drawn from 30 countries and more than 20 major industrial sectors. The organization also benefits from a thriving global network of national and regional business councils and partner organizations.

The WBCSD aims to be a catalyst for change and fosters closer cooperation between business, government and other organizations concerned with the environment and sustainable development. It also serves as a forum where leading business people can exchange ideas and best practice in this field. The organization’s work program reflects the determination of many in business to engage in an action-oriented approach. In particular, the WBCSD carries out a program covering the following focus areas, eco-efficiency, corporate social responsibility, technology, innovation and sustainability, climate and energy, and natural resources.

The WBCSD is uniquely positioned to look at areas where industry’s voice can make a difference. It seeks to collaborate with others in order to create framework conditions that will allow business to remain competitive while contributing effectively to sustainable development.

“CSR is not only solely about promulgating the values and principles of your company. It is about your company understanding and taking account of the values and principles of everyone who has a stake in its operations.”

Vic Gedder, Group Chief Executive, Severn Trent

“...I believe that it is part of building good sustainable businesses to help establish safe, secure, stable and peaceful societies.

Business thrives where society thrives.”

Peter Sutherland
former Director-General of the World Trade Organisation,
Co-Chairman, BP Amoco,
Chairman, Goldman Sachs International
January 1999
